TECHNICAL DATA

Cable length (meters)	50
Country of origin	ITALY
Material	POLIESTER / STEEL
Warranty	2 YEARS
Width (mm)	470
Depth (mm)	330
Height (mm)	200
Net weight (Kg)	3.700

DESCRIPTION

5.2 mm diameter single-thread polyester cable probe with interchangeable M5 terminals, complete with flexible head and tensioning ring. Mounted on a vertical galvanized steel collection reel with a 340 mm diameter wheel. Color: orange. Dimensions: 455 x 330 x 180 mm. The 5.2 mm diameter polyester probe is suitable for residential electrical installations and is ideal for short, tortuous sections. The interchangeable brass fittings are threaded directly onto nylon; with a high breaking load, they are practical and easy to replace. Terminal thread: M5. This professional cable probe minimizes friction by halving the probe's contact surface with the walls of the pipe being inserted or with cables already present in the duct. The helical polyester probes facilitate both insertion and removal, saving considerable time. They feature threaded brass terminals that allow for easy interchangeability of the various accessories. This means that even with a very long probe, it will be possible to insert short sections without having to remove the entire probe. Once inserted, simply unscrew the tip and screw on the terminal, ready to pull the cables. It features a flexible, perforated curve guide tip and a pull rod with an interchangeable eyelet; it is highly flexible and easy to insert into pipes with a diameter of 20/32 mm. Made in Italy.
